

EarnPark 

EarnPark Protocol

Trust, but verify.

Strategy yield you can check yourself.

TOKEN2049 SINGAPORE • OCTOBER 2026

WHO WE ARE

EarnPark is a marketplace of crypto yield strategies, **running since 2022**

Users pick a strategy, deposit, and the strategy desk puts the money to work. The protocol on the next pages is how we make that work checkable from outside.

2022

platform live since

~2,000

active users

~\$18M

in strategies (TVL)

Figures as of October 2026, approximate.

TECHNOLOGY

EarnPark Platform LLP (UK)

develops the technology

OPERATOR

Earnpark Limited (BVI)

operates the service · not available in the EU/EEA, US or UK

CeFi yield: one button, many venues inside

Convenient.

You never deal with venues, positions or settlement.

But unverifiable.

From outside, nobody can check where the money is or whether it is all there.

CeFi yield hits the **limits of custody**

01

A promised rate is a bet

The manager fixes the rate and carries the risk that the market pays less. That is a bet on the market.

So the promise is kept low, and whatever the market pays above it stays with the manager.

In short: the user gets the floor, the manager keeps the upside.

02

You can't check it

Users see exchange reports about once a month. They are complex and full of detail nobody needs, like positions and leverage.

And they still don't answer the main question.

In short: is the money there? The report doesn't say.

03

Custodial risk

Funds sit on someone else's infrastructure. They can be frozen.

A server or a database can fail.

In short: your money depends on systems you can't see.

From CeFi yield to **verifiable yield**

Easy or open. Rarely both.

Products that are easy to use keep their books closed. Products with open books are built for professionals.

EarnPark today

Easy to use, books still closed, like the rest of CeFi.

EarnPark Protocol

Keep it easy. Open the books, so anyone can check.

EarnPark Protocol is a **glass box**

What's owed and what's held, in plain sight. The evolution of EarnPark, not a new business: same desk, same strategies, now verifiable.

Owed is public

Shares and their price live in the contract, not in our database.

Held is checkable

The balance behind those shares can be checked at the source.

Trades stay private

Positions and individual trades are not disclosed.

YOUR SHARE

You deposit, you get **shares of the strategy**

SHARE PRICE

Everything actually held in the strategy

Number of shares

YOU DEPOSIT

\$100

→ you receive 1 share

→

STRATEGY GROWS TO

\$110

→ your share is worth \$110

A share, not an IOU

A share is a part of the strategy itself, not a debt we owe you.

Separate books per strategy

The money of each strategy is accounted for separately.

Withdraw on request

Withdrawals are made on request.

Anyone can check the balance **at the source, any time**

Anyone can run their own verifier program. No sign-up with us, no reward, no permission needed.

The share price is confirmed by **independent validators**, not by EarnPark

So that no single party, us included, sets the price on its own.

- 1 **11 validators**, each queries every source of the strategy on its own.
- 2 Each validator **signs** the result it got.
- 3 When **at least 7 of 11 agree**, the contract updates the share price.

Current design: 11 validators, 7 must agree. Parameters may change.

No promised rate. Real result, shared risk.

Dynamic yield, no ceiling

No rate is promised, so there is no cap: the strategy's full result shows up in the share price, minus fees.

No bet against you

The manager doesn't bet on the market. Risk is shared, interests are aligned.

2%

Management fee

per year, on assets in the strategy

20%

Performance fee

of profit above the previous peak (high-water mark)

Fund-style fees, worked through ILLUSTRATIVE, NOT A FORECAST

STRATEGY EARNS / YEAR	MANAGEMENT	PERFORMANCE	TO THE USER
10%	2%	2%	6%
20%	2%	4%	14%
25%	2%	5%	18%

If the strategy earns less, we earn less.

Performance fee applies only above the previous peak.

Users are paid first

Every settlement cycle runs in the same fixed order.

If liquidity runs short, the cycle stops. Users get paid first; fees wait.

Validators **stake PARK** to do the work

Validators are independent operators who stake PARK and run verification software on their own servers. PARK is EarnPark's utility token; in the protocol, it is what a validator puts at stake.

STAKE

Stake PARK to become a validator

Staking PARK is the admission requirement. The number of validators and any additional criteria will be announced.

DELEGATE

Or delegate to a validator

Holders who don't run a validator can delegate their PARK. The validator sets its own commission.

PENALTY

Down or wrong: stake is cut

A validator that doesn't work or makes mistakes loses part of its stake, together with its delegators.

EXIT

Leave after a waiting period

Unstaking is not instant.

PAYMENT FOR WORK

Half of the management fee pays validators

It covers the work of confirming the share price and is paid out in PARK.

What's live, **what's next**

● Live today

EarnPark platform

Running since 2022.

Protocol contract: closed beta on Arbitrum

One strategy, USDC, small limits.

Platform Proof of Reserves, published

Self-attested: the figures are ours, not externally checked.

○ Building next

A verifier anyone can run

Check strategy balances at the source.

Validator network

Share price confirmed by validators, in the next contract version.

External audit of the contract

Not done yet.

BE THE FIRST

EarnPark 

We're gathering the **first validators** and early users

Become a validator

Run a node that checks strategy balances and confirms the share price.

Stake PARK

Query the sources, sign the results

Join the early access list

Be among the first to hear when the protocol opens to more users.

Updates and launch news first

Important information

- **Crypto-assets are volatile.** You can lose part or all of the funds you put in.
- **Returns are not guaranteed.** Figures in the examples are illustrative and are not a forecast.
- **Proof of Reserves does not protect your principal.** It does not remove market, strategy, protocol, counterparty or liquidation risk.
- **The protocol is in closed beta.** An external audit has not been carried out yet. Features described as "building next" are in development and may change.
- **Who provides the service.** The service is provided by Earnpark Limited (BVI). EarnPark Platform LLP (UK) develops the technology. The service is not available in the EU/EEA, the US or the UK.
- **PARK is a utility token, not an investment.** Token prices are volatile and can fall to zero.
- **This is not financial advice.**
